

IN THE ABSTRACT

The Abstract has been amended as follows:

ABSTRACT

A composite stent and ~~methods~~a method for making the same are provided. ~~In one embodiment a regioselective band is formed *in situ* on the stent. In one embodiment, the band is made of a regioselective material having a high creep compliance and having a second modulus of elasticity lower than that of a structural material comprising the stent. In one embodiment, the regioselective material is drip coated or dip coated on the stent near the ends. In one embodiment, the regioselective material includes a therapeutic agent, which may be a radioactive emitter, an anti-platelet drug, or an anti-proliferative drug.~~
